# SILLSKIN®

## Elevator Sill Overlays for Modernization and New Construction

SILLSKIN® is a patented, field-installed overlay system that delivers a premium finish with minimal disruption. Whether you're upgrading an existing entrance or finishing a new installation, SILLSKIN® provides a sleek, durable solution—quickly and cost-effectively.

### MODERNIZATION

#### Upgrade Without the Tear-Out

SILLSKIN® enhances the look of existing elevator sills without the need to remove the original. Installed directly over the current sill, this patented system eliminates demolition, reduces downtime and disruption—making it a fast, clean upgrade.

- Applied over existing sill—no removal required
- Avoids mess, noise, and surface damage to floors
- Fast turnaround with minimal impact to operations
- Modern, high-end appearance
- Seamless fit

### NEW CONSTRUCTION

#### Protect During Buildout. Finish at Turnover.

SILLSKIN® for new construction is a two-part system designed to protect and finish sills at the right stage of the project. A durable base sill is installed with the elevator equipment, followed by the overlay after construction wraps—delivering a pristine, turnover-ready result.

- Base sill installed during elevator installation
- Finished overlay applied post-construction
- Eliminates sill damage during construction
- Clean, consistent look at turnover
- Engineered for durability and visual impact

In addition to our core offerings, MEI – Archi-Tread also provides sill extensions and heated sills to meet your project specific requirements. Contact us today to discuss your next project.
